

# SCHOOL SAFETY + SECURITY

Safety has been a passion of Hager for over 170 years. Providing door hardware that meets current building codes is essential in all buildings but especially in schools, where the safety and security of our children are paramount.

Hager offers a wide range of product solutions to secure schools and classrooms. Mechanical solutions can be implemented when budget is a concern, but upgrading hardware for safety is a necessity. Electronic product solutions are also available when a higher level of control and security are required.

HS4 gives educational facilities the ability to provide different levels of security and safety that fit a range of budgets. There isn't a one-size-fits-all solution. The HS4 product line is able to secure an existing or new education facility and can be expanded to meet future growth.

HS4 can initiate lockdowns in multiple ways, using either software commands, credentials or external switches. Our team can assist in determining which process is right for your facility.

For additional information on our mechanical or HS4 electronic access control product offerings, please contact your local sales representative, our HS4 team at [accesscontrol@hagerco.com](mailto:accesscontrol@hagerco.com) or visit [hageraccesscontrol.com](http://hageraccesscontrol.com).
